

The **CLx10** - *The most powerful, portable **Continuous Light** for the professional photographer.*

“It’s the sun on speed dial” - Light & Motion’s new CLx10 photo/video light drives 25% more light, enabling professional photographers to transform how they work; dramatically expanding their freedom to harness the power of mirrorless cameras, shoot anywhere, and stay in the creative moment.

At only 1,237 grams, 2.7lbs, the weight of a full frame mirrorless camera with an 85mm lens, the CLx10 delivers 10,000 lumens for 45 minutes from its internal battery. The bayonet mount optics allow you to adjust the beam from spot to diffuse. The built-in interface directly mounts Profoto, Elinchrom, DOP Choice light shaping tools. It moves seamlessly into video where it can light 1000 frames/sec with no flicker.

“After extensive testing with our Champions of Light under a wide range of shooting conditions the overwhelming feedback was more power for action and daylight work. 10,000 lumens is the magic number and the CLx10 delivers! They also wanted full power when plugged into AC. The CLx10 delivers that too. It is the full package and will change the face of lighting for good.” Daniel Emerson, CEO.

CLx10 - MSRP @ \$1299 - light and power supply with umbrella and c-stand mount.

CLx10 Action Kit - MSRP @ \$1699 - includes all the accessories including the remote and Temba bag.

About Light & Motion

Light & Motion exists to bring light to the places you go – on location anywhere - be it on land or underwater. For 30 years we have collaborated with our users, consistently developing meaningful lighting products that enable them to create more with less. We value our success as a testament to the integrity and effectiveness of our products. We build all our camera lighting products in CA at our vertically integrated factory.
